Domain Distribution

Iterative minimization

Tree-Construction

Communication

Tree-walk like, process all active particles

find neighbors

Compute local contributions

Fill export list

export list full ?

no

yes

Communicate list

find neighbors

Compute local contributions

Fill return list

all done ?

no

yes

Communicate results

Iteration between local and global

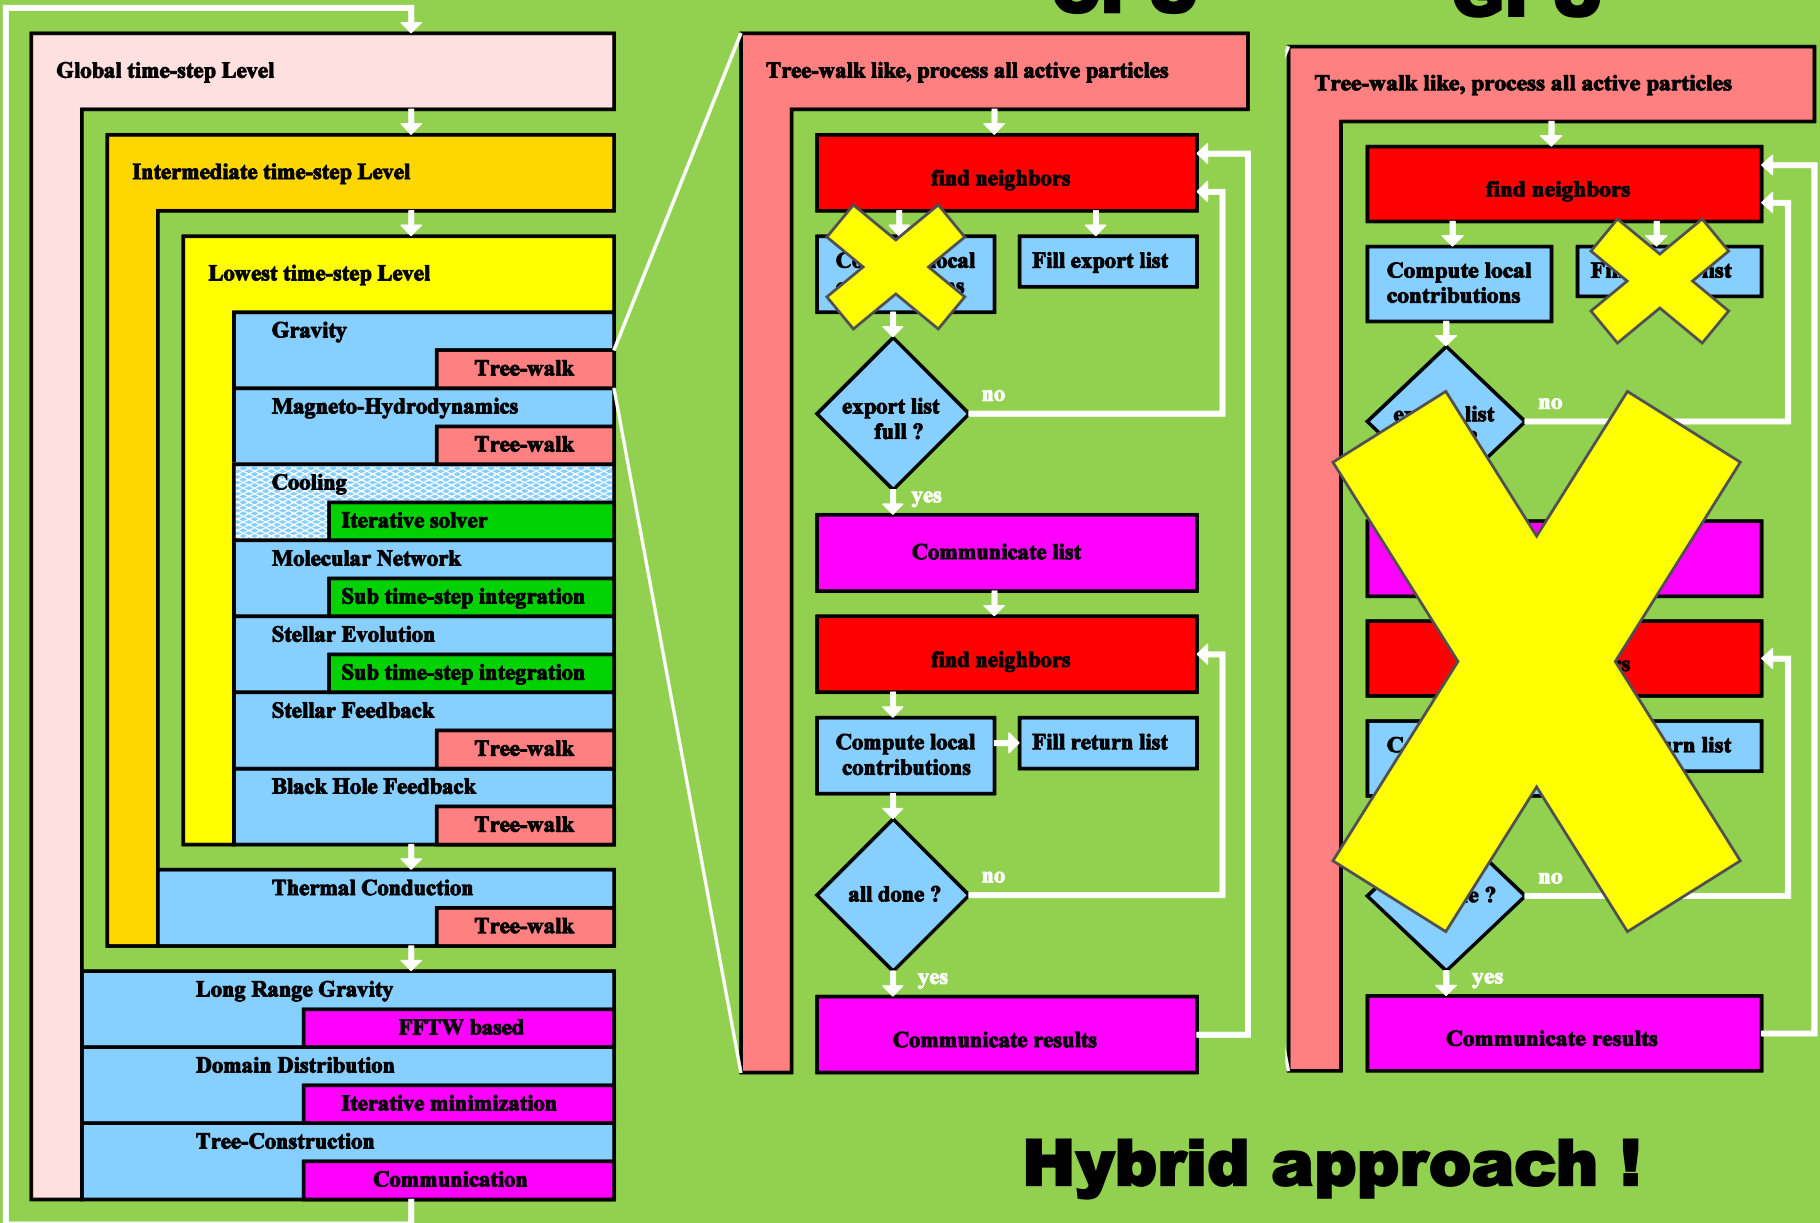

SHE  
believed  
she could  
SO SHE  
did

# Algorithmic motif on arrival:

Interplay of different physics modules in Gadget3

**CPU**

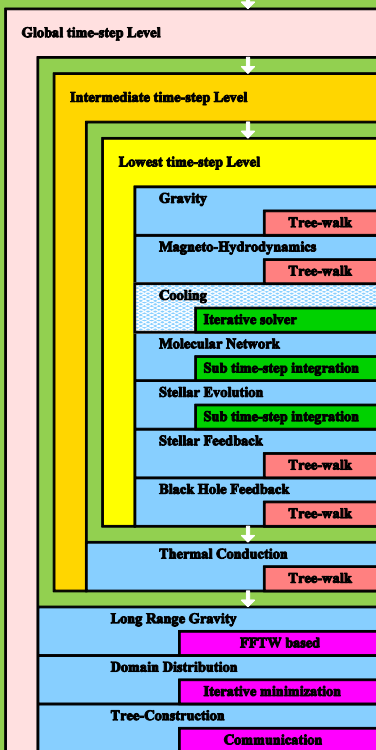

**GPU**

# Algorithmic motif on departure:

## Double hybrid approach !

Interplay of different physics modules in Gadget3

### CPU

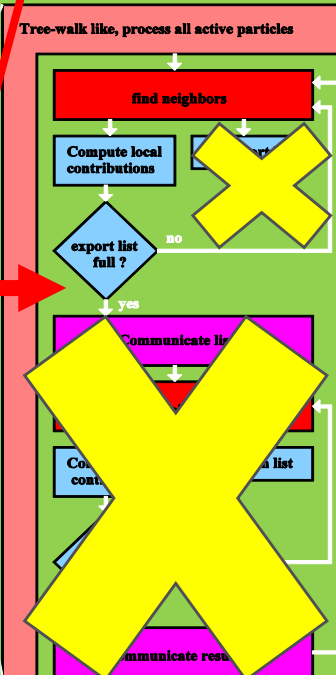

Tree-walk like, process all active particles

### GPU

Tree-walk like, process all active particles

**depending on the number of transferred particles**

**small timesteps  
(low number of  
active particles)**

**large timesteps  
(high number of active particles)**

# from HACK 2015 to HACK 2017

# GPU Performance (production):

**256 Nodes with GPUs, 48 Million part/node**

Step 0, Time: 0.0163934, CPUs: 256

	CPU only	GPU hybrid
total	356.60	153.48
treegrav	112.32	44.08
treebuild	17.64	28.08
treewalk	86.22	8.90
pmgrav	52.42	16.92
peano	12.32	4.94

**But: 16.9 produced crashes with -O2 (17.7 was fine)**

## Next timestep

**can be placed  
on the GPU**

**CPU serving other nodes**

## GPU kernel for local particle

*When life  
gives you*  
a hundred  
reasons  
TO CRY

★

*Show life  
that you have*  
a hundred  
reasons  
TO SMILE

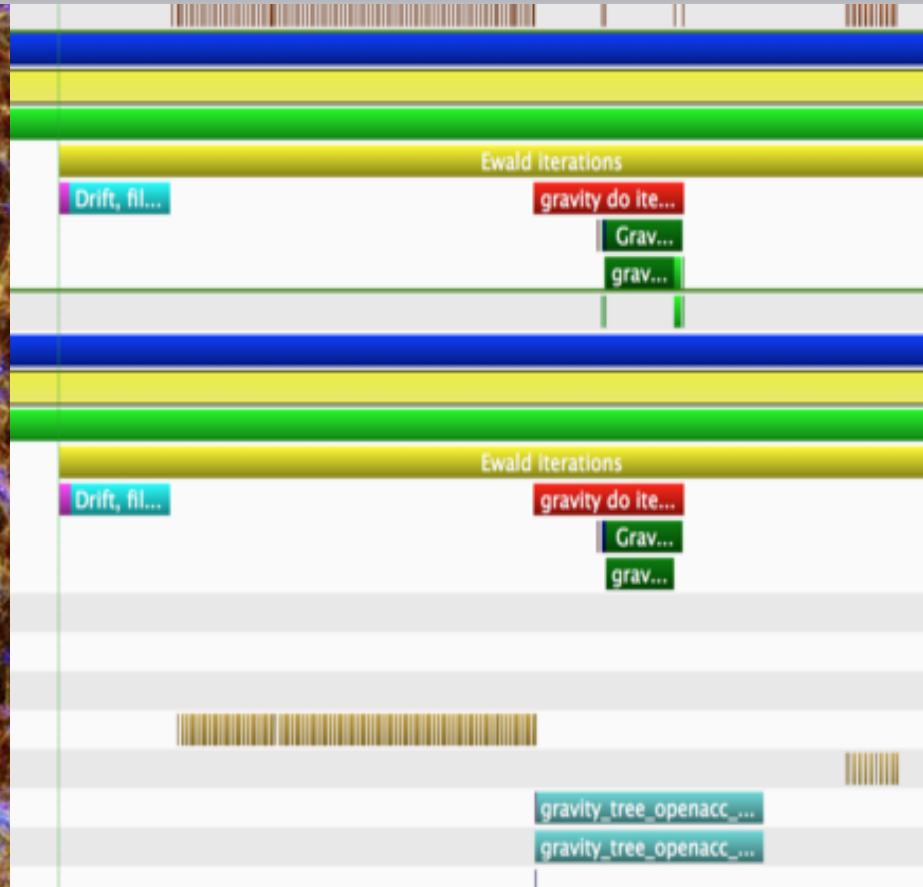

*When life  
gives you*  
a hundred  
reasons  
TO CRY

★

*Show life  
that you have*  
a hundred  
reasons  
TO SMILE

# Timings of super critical cases:

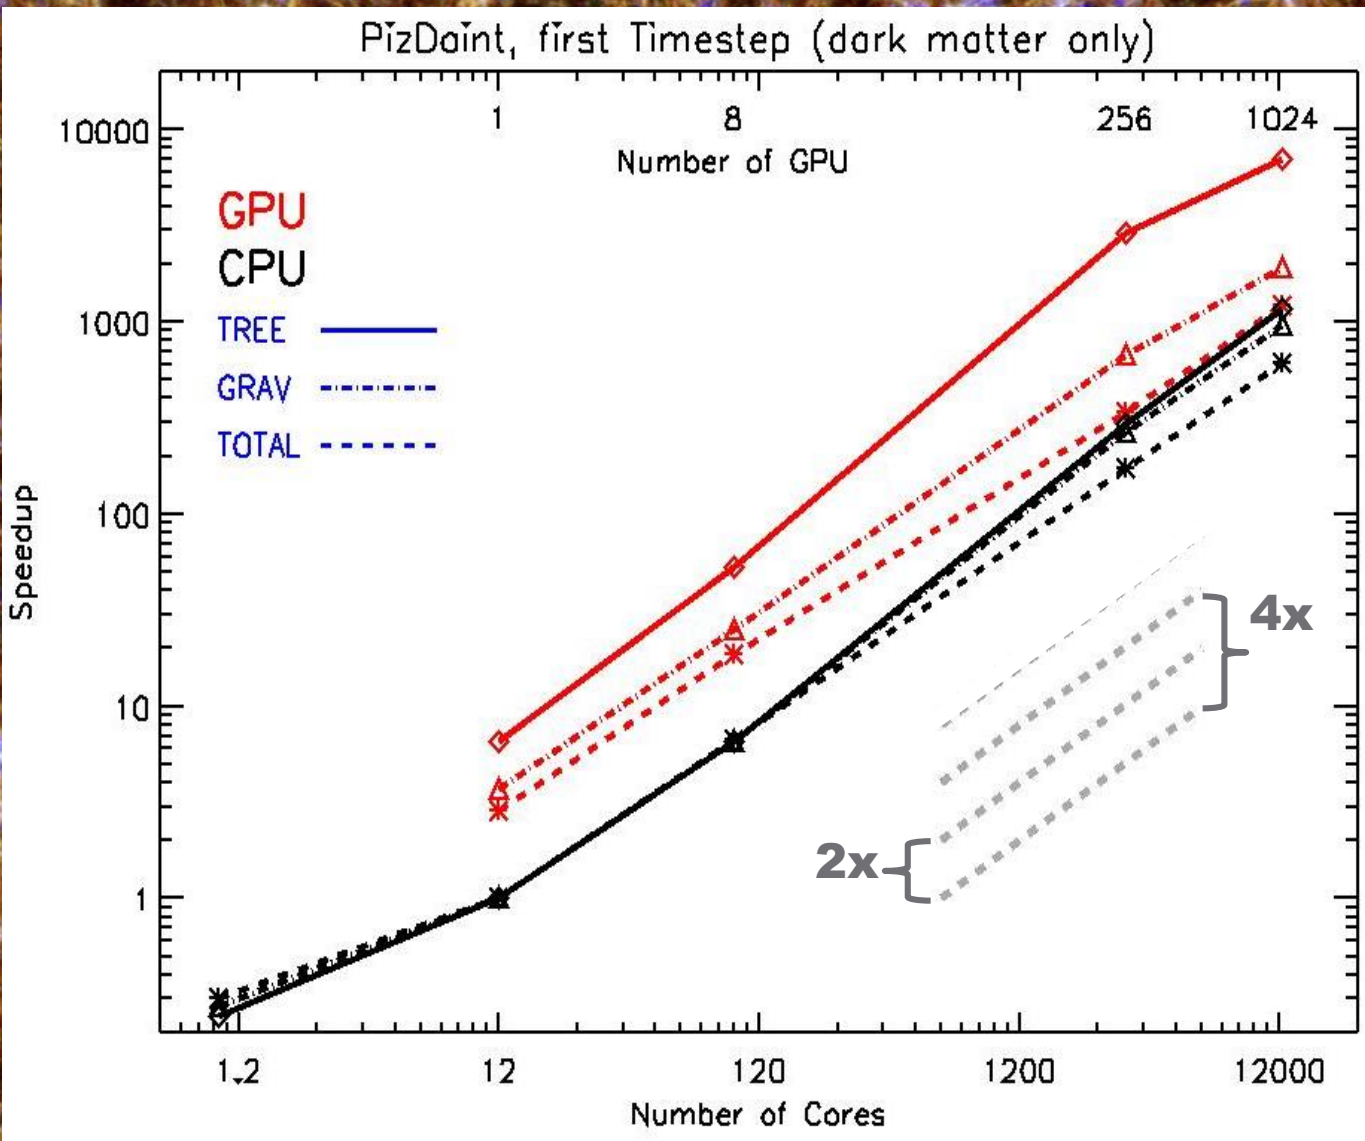

**But:**

- **Pinning slows down the CPU part !**
- **Causes crashes (pool manager)**

# Scaling to large number of GPUs:

WHATEVER  
YOU DECIDE  
TO DO,  
MAKE SURE  
IT MAKES  
YOU  
HAPPY

[illegible]

- **Keep Speedup + Happyness positive ✓**
- **Profiling / optimize the new approach ✓**
- **Test Scaling up to very large number of GPUs ✓**
- **Port approach to other physical modules (✓)**
- **Obtain a first production version for GPUs ! (✓)**
- **Additional CPU performance gained !**
